DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, 12-17, and 18-20 are drawn to an apparatus for generating an output beam of light, classified in class 372, subclass 20.
- II. Claims 10 and 11 are drawn to a control unit, classified in class 372, subclass 32.

The inventions are distinct, each from the other because of the following reasons:

Inventions 1 and 2 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by the different classification. The subcombination has separate utility such as a control unit for controlling a different laser device such as a Fabry Perot laser.

This application contains claims directed to the following patentably distinct species of the claimed invention: a laser apparatus operable at a plurality of operating frequencies over an optical frequency range comprising a laser source for generating an output beam of light having an output frequency, an output phase and an output power

and for generating a reference beam of light including the patentable distinct embodiments as disclosed in fig. 1, 2A, and 7.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
